“Water Conservation As A Long - Range Strategy in Municipal Water Supply Planning : The Case of Oklahoma”. 1985

Abstract

This study is concerned with Oklahoma water managers’ attitudes toward the adoption or rejection of long–term water conservation options in small and medium sized cities under 50000 in population.

To address the study’s main questions’ a questionnaire was mailed to each of the water managers in the selected Oklahoma towns and cities (which was completed by 49 out of 60 managers). The obtained data were analyzed using contingency tables, and the two – way cross –tabulation tables were employed to indicate the relationship between the dependent and independent variables.

The results of the study indicated that local water managers considered local governments as the most appropriate body to deal with water management issues. Furthermore, Oklahoma water managers in the selected cities and towns expressed their profound concern about the potential revenue loss of long–term water conservation measures when adopted and implemented. Respondents also realized the implementing long – term water conservation alternatives often require sophisticated preparation and execution to be successful.

السجل الوظيفي

التاريخ	جهة العمل وعنوانها	الوظيفة
1978/8/31 – 1976/9/1	Department of Geography – University of Jordan / Amman – Jordan	Research Assistant
1983/12/15 – 1983/6/1	University of Oklahoma – Norman. U.S.A	Research Assistant
